Who else wants access to the same renewable energy forecasts trusted by 11 major European TSOs?

spotrenewables is a European forecasting service exclusively focused on renewable energies. Professionals active in power markets come to us to access the same advanced wind and solar power forecasts already used by many of the major European TSOs.

Product Features

- Continuously updated forecasts for wind power, solar power, and temperature
- 8 updates per day (pre-release update available early before order book closure)
- More than 27 European countries covered
- Internationally accredited and proprietary forecast model well spread amongst trader clients
- spotrenewables combines four of the world's leading weather models: ECMWF, HiRLAM, UKMET, and GFS
- Forecast horizon up to 10 days with 15-minute resolution
- Nowcasting and actual values available for selected regions
- Warning signal in case of wind turbine shut down risk
- Historical data available for analysis

Data Access

- Flexible delivery options per secured FTP server or E-mail
- Visualisation of interactive charts on pass-protected web platform
- Quick & easy data download

Pricing

- spotrenewables is available on subscription basis
- Fully evaluate all features with a 30-day risk FREE trial

Who is it for?

We work with professionals involved with power markets and power grids. We help them to minimize the risk in anticipating the impact of renewable energies on the spot market price.

Our clientele works as power traders, trading analysts, portfolio-, or risk managers for:

- Utilities
- Trading houses
- Transmission system operators
- Financial institutions
- Information provider
- Broker
